PATENT COOPERATION TREATY

From the INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

To: KADOR & PARTNER Corneliusstrasse 15 80469 Munich ALLEMAGNE

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(PCT Rule 71.1)

Date of mailing

(day/month/year)

06.07.2005

Applicant's or agent's file reference

K 50 456/3mz

IMPORTANT NOTIFICATION

International application No. PCT/EP2004/009491

International filing date (day/month/year)

Priority date (day/month/year)

25.08.2004

27.08.2003

Applicant

BOREALIS TECHNOLOGY OY

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/009491

JAP20 Rec'd PCT/PTO 21 FEB 2006

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Novelty (Art. 33 (2) PCT)

Document D1 (EP0393959) discloses a flame retardant polymer composition comprising an organic polymer e.g. ethylene-butyl acrylate copolymer, a silicone fluid or gum (2-8 %) e.g. polydimethylsiloxane, and an inorganic filler (15-50 %) e.g. calcium carbonate. The inorganic filler can be present in the composition in an amount of 15-50 % and has an average particle size between 0.5-2 microns. The polydimethylsiloxane is present in the composition in an amount of 2-8 %. Neither a hydroxide nor a hydrated compound is present in the composition. The composition is used in wire or cable applications. The subject-matter of claims 1-13 is not novel in the sense of (Art. 33(2) PCT).

The document D2 (EP1188793) discloses a flame retardant composition comprising a polycarbonate, an inorganic filler e.g. calcium carbonate and an anti-drip agent. Optionally, the polycarbonate can be blended with an other thermoplastic resin like a polyolefin e.g. polypropylene or polyethylene in a content between 1-40 parts by mass (page 8 line 25). The anti-drip agent can be e.g. a nano-filler or a polydimethylsiloxane, and is present in the composition in an amount up to 5 part by weight based on 100 part of the composition. The composition further comprises an inorganic filler e.g. calcium carbonate, present in an amount of 2-60 parts by weight based on 100 parts of the composition and characterised by a particle size of 0.2-20 microns. The subject-matter of claims 1-12 is not novel in the sense of (Art. 33(2) PCT).

Inventive step (Art. 33(3) PCT)

Document D1 discloses a flame retardant polymer composition comprising an organic polymer e.g. ethylene-butyl acrylate copolymer, a silicone fluid or gum (2-8 %) e.g. polydimethylsiloxane, and an inorganic filler (15-50 %) e.g. calcium carbonate.

The subject-matter of present claim 1-13 differs from this prior art in the aspect ratio of the inorganic filler.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/EP2004/009491

There is no evidence found in the present application in relation to the closest prior art (document D1) showing that the distinguishing feature being the aspect ratio of the organic filler leads to an technical effect.

The problem to be solved by the present invention may therefore be regarded as providing a further composition.

The solution as proposed in the present application cannot be considered as involving an inventive step (Art. 33 (3) PCT). Inorganic fillers e.g. calcium carbonate having a particle size smaller than 0.5 micron and an aspect ratio of below 5 are known from the prior art (document D3 EP1245730).

Re Item VII

Certain defects in the international application

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in document D2 is not mentioned in the description, nor is this document identified therein.

The specification for an European application should be capable of being understood without reference to any other document. The expression "hereby incorporated by reference" found in the description is therefore not according to the EPC requirements.
